

SECTION 02:

MP ROTATOR®

ADVANCED FEATURES

AUTOMATIC MATCHED PRECIPITATION

The MP Rotator® has the unique ability to control the amount of water flowing through the nozzle at various arc and radius settings, resulting in matched precipitation regardless of the nozzle setting.

DOUBLE-POP

The MP Rotator's nozzle pops up from its protected position only after the riser is fully extended, providing superior defence against dirt and debris.

DISTRIBUTION UNIFORMITY

The various streams of the MP Rotator allow it to target all areas of the landscape evenly, yielding superior uniformity over traditional spray nozzles. Each stream targets specific areas to achieve higher efficiency and even coverage.

LOW PRECIPITATION RATE

Since the vast majority of soils have an infiltration rate of less than 25 mm/hr, irrigating at a low precipitation rate is essential to achieve efficiency.

The standard MP Rotator line applies water at 10 mm/hr, while the SR Series has a precipitation rate of 20 mm/hr. Either choice will avoid runoff, saving water and preventing erosion.

SHORT RADIUS (SR) SERIES

Achieve efficient irrigation in narrow spaces with the SR Series. MP800SR allows for radius adjustment down to 1.8 m, providing opportunity for overhead irrigation in smaller spaces than ever before possible.

Radius: 2.5 to 9.1 m

Bold = Optimal pressure for the MP Rotator is 2.8 bar; 280 kPa. This can easily be achieved by using the MP Rotator with the Hunter PRS40 Spray Body, pressure regulated at 2.8 bar; 280 kPa.

Works best with PRS40

For PRS40 information see page 65

MP800SR

Efficient Watering For Spaces Under 2.4 Metres

Efficiently simulating natural rainfall has always been a challenge in small spaces. Most spray nozzles with short radius capability apply water much faster than the soil can absorb (50 mm/hr or more), and typically have poor uniformity. Therefore, many users resort to drip irrigation which does not simulate rainfall, and cannot be used in turf applications. Up to now, high-volume, inefficient overhead sprays have been the only solution.

Now, Hunter introduces the MP800SR, a high-efficiency overhead irrigation solution for small spaces. The MP800SR will adjust down to 1.8 m, and uses a low precipitation rate of 20 mm/hr to help avoid runoff. Its superior distribution uniformity ensures that the least amount of water is used to get the job done.

To achieve its lowest radius setting of 1.8 m, an inlet pressure of 2.1 bar; 210 kPa is required. The MP800SR should be paired with the PRS30 in this application.
